

FULL ATHLETIC UPPER-BODY SESSION

UPPER-BODY

OPUS ATHLETIC

PERFORMANCE DEPT.

TRAINING GUIDE

THIS UPPER-BODY SESSION IS PART OF THE FULL-BODY WORKOUT PROGRAM, WHICH IS DESIGNED TO BUILD STRENGTH AND ENDURE. IT INCLUDES A HEAVY BENCH PRESS, BARBELL ROW, PULL-UPS, AND A BURNING TRICEPS EXTENSION. THE SESSION IS DESIGNED TO IMPROVE YOUR UPPER-BODY STRENGTH AND PERFORMANCE.

001-001

001-001

001-001

001-001

The upper body training session is part of the full-body workout program, designed to build strength, power, and muscle mass. The session includes a heavy bench press, barbell row, pull-ups, and a burning triceps extension. The session is designed to improve your upper-body strength and performance.

OPUS ATH

UPPER-BODY WORKOUT

BLOCK 01:

MAIN POWER WORK

EXERCISE	Sets x Reps	INTENSITY
1. Med-Ball Pushes	3 Sets: 5 Reps	Maximal Intent
2. Med-Ball Rotational Throws	3 Sets: 3 Reps	Maximal Intent
3. Push-Press	4 Sets: 3 Reps	@ 82.5% of 1RM

OPUS ATH

UPPER-BODY WORKOUT

BLOCK 02:

STRENGTH / HYPERTROPHY

EXERCISE	Sets x Reps	INTENSITY
1. Pull-Ups (Weighted)	3 Sets: 5-8 Reps	0-1 RIR
2. DB Bench Press	2 Sets: 4-8 Reps	0-1 RIR
3. Machine Rows	2 Sets: 4-8 Reps	0-1 RIR
4. Cable Lateral Raises	2 Sets: 4-8 Reps	0-1 RIR

OPUS ATH

UPPER-BODY WORKOUT

BLOCK 03:

OPTIONAL ARM WORK

EXERCISE	Sets x Reps	INTENSITY
1. Cable Hammer Curls	2 Sets: 5-10 Reps	0-1 RIR
2. Cable Tricep Push-Downs	2 Sets: 5-10 Reps	0-1 RIR

THIS UPPER BODY TRAINING SESSION IS PART OF THE OPUS ATHLETIC - THE PROGRAM PHASE 3: PURE FORCE, A PERFORMANCE-FOCUSED PHASE DESIGNED TO MAXIMIZE STRENGTH, EXPLOSIVE POWER, AND MUSCULAR SIZE. THE SESSION BEGINS WITH EXPLOSIVE MEDICINE BALL WORK, FOLLOWED BY HEAVY PUSH PRESSES TO DEVELOP UPPER BODY POWER, FORCE PRODUCTION, AND OVERALL PRESSING STRENGTH. THE WORKOUT THEN SHIFTS ITS FOCUS TOWARD STRENGTH AND HYPERTROPHY, UTILIZING HEAVY PULLING AND PUSHING MOVEMENTS ALONGSIDE TARGETED ACCESSORY EXERCISES. THESE MOVEMENTS ARE DESIGNED TO STIMULATE KEY MUSCLE GROUPS, PROMOTE LEAN MUSCLE GROWTH, IMPROVE JOINT STABILITY, ENHANCE STRUCTURAL BALANCE, AND BUILD LONG-TERM RESILIENCE.

Upper-Body

True Athlete [The Program]

Focus: Strength/Power

This sample upper-body session from True Athlete – The Program is built to enhance strength, power, and overall hypertrophy, helping you elevate your overall athletic performance.

A black and white photograph of a person performing a power jerk. The person is in a low, athletic stance, lifting a barbell with both hands. The barbell has a weight plate with the number '20' visible. The person is wearing a dark tank top and a wristband on their left wrist. The background is dark and out of focus, showing some gym equipment. The overall mood is intense and focused.

Power Jerks

4 Sets - 2 Reps [3-5 min Rest]

Intensity: 82% - 90% 1RM

Push presses develop full-body power, explosive strength, and overhead stability. They are an excellent movement for training the body to work in sequence, improving total power output and coordination.

● ● ● ● ● ● ● ● ● ●

2

Push presses develop full-body power, explosive strength, and overhead stability. They are an excellent movement for training the body to work in sequence, improving total power output and coordination.

Pendley Rows

3 Sets - 5 Reps [3-5 min Rest]

Intensity: 70-75% of 1RM [Explosive]

Explosive pendley rows develop overall pulling power by moving moderate loads as quickly as possible. Each repetition should be performed with maximal intent to optimize power output.

[Nr. 1]

Running Simplified

Running is a foundational tool for building aerobic capacity, mental resilience, and long-term endurance performance.

It strengthens your heart, lungs, and muscular endurance, improving recovery, work capacity, and overall health.

TRAINING BENEFITS

- Aerobic Base:** Improves heart and lung efficiency
- Recovery:** Allows faster recovery between efforts
- Work Capacity:** Allows better performance under fatigue

TRAINING TIPS

- Intensity Zones:** Different HR Zones target certain adaptations
- Volume is King:** For running, high volumes are needed to progress

Running improves your body's ability to endure activity over time, making it a cornerstone of endurance training, improving recovery, and aerobic capacity.

It relies on cardiovascular efficiency, aerobic energy systems and muscular endurance to maintain performance over long durations.

Through consistent training, your body adapts by improving oxygen delivery, energy utilization, and resistance to fatigue, allowing you to go farther, recover faster, and perform better.

FULL RUNNING TRAINING GUIDE

RUNNING GUIDE

OPUS ATHLETIC

PERFORMANCE DEPT.

TRAINING GUIDE

Running training develops the athlete's ability to sustain force production and efficient movement over prolonged periods, reducing fatigue while maintaining performance quality. Through targeted exercises to endurance and moderate intensity, athletes can improve their aerobic capacity and muscular endurance, leading to enhanced performance in long-distance running events.

[Nr. 2]

Heart-Rate Zones

Each heart-rate zone targets a specific physiological system.

Zone 1 (active recovery) is not included in this list.

ZONE 2 AEROBIC BASE

Training: 60-70% of max HR | 2-4 times a Week | 45-120min

Effects: Builds aerobic capacity

ZONE 3 SUB-THRESHOLD

Training: 70-80% of max HR | 1-3 times a Week | 20-40min

Effects: Improves running efficiency at higher speeds

ZONE 4 THRESHOLD

Training: 80-90% of max HR | 1-2 times a Week | sub 15-20min

Effects: Increases lactate tolerance and endurance

ZONE 5 VO2 - MAX

Training: +90% of max HR | max. 1 time a Week | sub 10min

Effects: Elevates oxygen uptake and high speed endurance

[Nr. 3]

Training Guidelines

For effective, long term running progress, use the following training guidelines regarding reps, volume and intensity.

FREQUENCY

Aim for **2-4 running sessions per week**, based on your training goals, recovery capacity, and overall workload.

KEY SESSIONS

Long Run: 45-120min @ Zone 2-3 (65-75% max HR)

Tempo Run: 20-40min @ Zone 3-4 (75-85% max HR)

Intervals: 5-15min @ Zone 4-5 (+80% max HR)

These guidelines are carefully designed to provide the optimal balance between stimulus and recovery, helping you build endurance effectively without over-stressing the body.

By managing intensity, volume, and rest, you create the right conditions for improving aerobic capacity, increasing efficiency, and avoiding overtraining.

This ensures steady progress, consistent performance and long term development in your running journey.

FULL SPRINTING TRAINING ROUTINE

SPEED TRAINING

SPRINTING TRAINING DEVELOPS MAXIMAL SPEED, ACCELERATION MECHANICS, AND NEUROMUSCULAR EFFICIENCY REQUIRED FOR HIGH-LEVEL ATHLETIC PERFORMANCE. A WELL-DESIGNED SPRINT PROGRAM ENHANCES AN ATHLETE'S ABILITY TO APPLY FORCE RAPIDLY, MAINTAIN EFFICIENT MECHANICS AT HIGH VELOCITY, AND REPEATEDLY EXPRESS MAXIMAL SPEED WITH MINIMAL PERFORMANCE DROP-OFF.

0001 0001

0001 0001 0001

0001 0001 0001 0001 0001

0001 0001

Sprinting is a specialized form of training for athletes to develop maximal speed, acceleration, balance, and neuromuscular efficiency. The components that make up sprinting are: speed, acceleration, balance, and neuromuscular efficiency. Speed is the ability to move forward as fast as possible. Acceleration is the ability to increase speed as quickly as possible. Balance is the ability to maintain equilibrium while moving. Neuromuscular efficiency is the ability to use the muscles and nerves to move the body as efficiently as possible. Sprinting is a complex skill that requires a combination of physical and mental attributes. It is a sport that is both challenging and rewarding. It is a sport that can help athletes improve their performance and reach their goals. It is a sport that can help athletes develop the skills and techniques they need to succeed. It is a sport that can help athletes become the best they can be.

SPRINTING TRAINING

BUILT FOR REAL ATHLETES

DAY ONE - TOP SPEED

TRAINING 01: MAXIMAL VELOCITY FOCUS

- I. HURDLE HOPS: 3 SETS - 4 REPS | FOCUS ON SHORT GROUND CONTACTS
- II. FLYING SPRINTS:
 - 2 SETS | 10M ACCELERATION + 10M FLY (@ 100%)
 - 3 SETS | 20M ACCELERATION + 15M FLY (@ 100%)
- III. SINGLE LEG HOPS: 2 SETS - 6 REPS | MAX DISTANCE + FLUID MOVEMENT

SPRINTING TRAINING

BUILT FOR REAL ATHLETES

DAY TWO - ACCEL.

TRAINING 02: ACCELERATION FOCUS

- I. TRIPLE BROAD JUMPS: 3 SETS | MAXIMAL DISTANCE + REACTIVITY
- II. ACCEL. COMPLEX: 2-3 TOTAL SETS | 1 SET = 1 REP/SET OF EACH EXERCISE
 - I. EXERCISE 01: HEAVY RESISTED SPRINTS | 10M @ 50% OF BW
 - II. EXERCISE 02: ACCELERATION SPRINTS | 10M @ NO RESISTANCE
- III. ACCELERATION SPRINTS: 3-4 SETS - 20M | MAXIMAL INTENT

SPRINTING TRAINING DEVELOPS THE ATHLETE'S ABILITY TO PRODUCE MAXIMAL FORCE APPLY AND MAINTAIN EFFICIENT MECHANICS AT HIGH VELOCITIES, MAINTAINING SPEED WHILE MINIMIZING TECHNICAL BREAKDOWN THROUGH REPEATED EXPOSURE TO SHORT DURATION, HIGH-INTENSITY EFFORTS. THE NEUROMUSCULAR SYSTEM ADAPTS TO RECRUIT MOTOR UNITS MORE EFFECTIVELY, WHILE COORDINATION AND STIFFNESS IMPROVE TO SUPPORT RAPID FORCE APPLICATION. GROUND CONTACT TIMES DECREASE, RATE OF FORCE DEVELOPMENT INCREASES, AND TECHNICAL EFFICIENCY IS REFINED ACROSS ACCELERATION AND MAXIMUM VELOCITY PHASES. THIS RESULTS IN IMPROVED TOP SPEED, MORE CONSISTENT SPRINT MECHANICS, AND GREATER RESISTANCE TO PERFORMANCE DECLINE DURING REPEATED HIGH-SPEED EFFORTS.

BUILT FOR THOSE WHO RELENTLESSLY PURSUE GREATNESS

CREATED BY: OPUS ATHLETIC | TRUE ATHLETE

FULL STRENGTH TRAINING GUIDE

STRENGTH TRAINING

OPUS ATHLETIC

PERFORMANCE DEPT.

TRAINING GUIDE

STRENGTH TRAINING IS A FUNDAMENTAL COMPONENT OF ATHLETIC PERFORMANCE. IT ENHANCES MUSCULAR ENDURANCE, IMPROVES METABOLIC ADAPTATION, AND INCREASES THE EFFICIENCY OF THE CENTRAL NERVOUS SYSTEM. REGULAR STRENGTH TRAINING CAN ALSO HELP PREVENT INJURIES BY STRENGTHENING THE SUPPORTING MUSCLES AND JOINTS. CONSISTENT STRENGTH TRAINING IS ESSENTIAL FOR ACHIEVING YOUR FITNESS GOALS AND IMPROVING YOUR OVERALL PHYSICAL CONDITION.

[Nr. 1]

Defining Strength

Strength is the capacity to generate maximal force against external resistance.

It depends on effective coordination between the muscles and the central nervous system, allowing the recruitment of high-threshold motor units to produce force.

TRAINING TIPS

- High Loads:** Train with load above 80% of 1RM
- High Quality:** Minimize Bar-Velocity loss
- Maximal Intent:** Every rep 100% effort + execution

Strength is your body's ability to exert force against resistance, making it a fundamental component of athletic movements and physical performance.

It depends on a combination of neuromuscular adaptations, such as the efficiency of the central nervous system (CNS), and structural adaptations, including increases in muscle size.

Together, these factors enhance your body's overall capacity for force production and enable greater power and control during various activities.

[Nr. 2]

Training Principles

USE HEAVY LOADS

Use Weights above 80% of your 1RM

High loads are necessary to stimulate the central nervous system and recruit the number of muscle fibers required to produce sufficient force to drive adaptation.

HIGH QUALITY REPS

Consistent Bar Velocity (0.45-0.65 m/s)

High-quality reps are essential. Bar velocity should stay within 0.45-0.65 m/s to maximize motor unit recruitment while limiting fatigue, with velocity loss below 15-20%.

LONG REST TIMES

Rest 4-6min between Sets

Long rest periods ensure adequate recovery between sets, allowing athletes to maintain high force output and maximize the quality of each repetition.

[Nr. 3]

Training Guidelines

For effective Strength Development, follow the following Training Guidelines:

VOLUME + FREQUENCY

Total Volume: 25 total reps per training session.

Frequency: 1-3 times a week (optimal: 2)

INTENSITY + REPS

75 - 82.5% of 1RM: 1-5 Reps x 4-6 Sets

82.5 - 90% of 1RM: 1-3 Reps x 3-5 Sets

90 - 100% of 1RM: 1-2 Reps x 1-4 Sets

These guidelines are designed to provide the appropriate level of stimulus needed to build strength effectively while minimizing excessive fatigue to both the central nervous system and muscles. Although they are not set-in-stone rules, they offer a solid baseline to guide training decisions.

By managing this balance carefully, you create an optimal environment for maximizing strength gains, improving performance, and supporting consistent long-term progress without unnecessary risk of burnout or injury.
